

Digi EX15 Cellular Extender: Mobile Kiosk and/or 'Store within a Store'

The Digi® EX15 ensures the best primary or failover data connection performance using LTE data at a stand-alone mobile kiosk (such as a mall or pop-up store). Challenges may include the inability for a land line connection or the kiosk location is in an area with poor LTE data reception. By using the Digi EX15, you can perform your own site survey using our convenient temporary battery backup. Locate a great LTE data signal, mount your device and run standard Ethernet (up to 300 feet with CAT6 cabling) back to your kiosk. Avoid costly site surveys and connect your kiosk for a more reliable LTE data connection.

Retail Environment:

- Connected Devices
- Point of Sale
- Credit Card Terminal
- Security Cameras

Rapid Mounting

Optional mounting options for drywall, drop ceiling, open ceiling and glass

Temporary Battery Pack

Optional battery for site survey to identify optimal signal strength placement
